## 6Inductance

Expressed by three-digit alphanumerics. The unit is micro-henry $(\mu \mathrm{H})$. The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures. If there is a decimal point, it is expressed by the capital letter "R". In this case, all figures are significant digits. If inductance is less than $0.1 \mu \mathrm{H}$, the inductance code is expressed by a combination of two figures and the capital letter " N ", and the unit of inductance is nano-henry ( nH ).
The capital letter " N " indicates the unit of " nH ", and also expresses a decimal point. In this case, all figures are significant digits.
